

Project PROPOSAL

ARCHIVAL

A Design Curation Platform.

KATE GALVIN, 1/22/2026

OVERVIEW & COMPARISON

[CONCEPT]

THE PERSONAL MUSEUM

Archival is a curation environment for personal belongings. It bridges the gap between home inventory and institutional archiving by treating objects as artifacts with historical context.

[DIFFERENTIATION]

VS. EXISTING SOFTWARE

Unlike generic tools like Excel or Sortly, Archival provides a more visual and user friendly experience. It doesn't just list items; it maps them to design movements and temporal narratives.

CORE CAPABILITIES

ACQUISITIONS

Adding items includes accessing automated metadata from Google Books, Discogs, and Unsplash APIs.

THE VAULT

Grid for discovery and exhibition of the the users items.

CHRONOLOGY

Interactive timeline plotting items over time based on their year of release.

ANALYTICS

Visualizations for temporal density and mapping items to design DNA.

USER

THE MODERN CURATOR

The application targets design enthusiasts, fashion lovers, bibliophiles, and collectors who value intentionality. It is for those who view their homes, closets, and collections as their personal curated exhibitions.

HOW THEY USE IT

Logging items, analyzing their inventory via data visualizations, viewing their collection on a timeline, and creating collections.

ENGAGEMENT & VALUE

Personal

INTEREST

Uses Prior Knowledge

Angular, web-apps, front-end development, and gallery web design are all in my wheelhouse.

Aligns with Interests

I love design, fashion, literature, and purposeful collections. The idea of connecting these interests to software development is really exciting to me.

Valuable for Future

The job I will start this summer is on a team that uses Angular and works on front end development for data visualization creating software, which this project connects to in ways that will prepare me.

TECHNICAL REQUIREMENTS

Category	Requirement	Specifics
Hardware	Workstation	Min. 1024x768 display for data visualization
Framework	Angular 17+	Component-driven architecture with Tailwind CSS
Backend	Supabase	PostgreSQL with Row Level Security (RLS)
Visuals	D3.js / Chart.js	SVG-based timeline and canvas analytics
